```
The invention relates to methods for the screening, diagnosis and prognosis of Alzheimer's disease. The methods involve the detection of Alzheimer's Disease-Associated Features (AFs) and Alzheimer's Disease-Associated Protein Isoforms (APIs) in cerebrospinal fluid, serum or Associated Protein Isoforms (APIs) in cerebrospinal fluid, serum or Expression Reference Protein Isoform (BRPI) in order to determine whether a patient is suffering from, or has a predisposition to, Alzheimer's Disease. The relative abundance of the AFs and APIs correlates with the severity of Alzheimer's Diseases. The present sequence is a peptide
                                                                                                                                                                                                                                                                                                                                        Screening for Alzheimer's disease in a mammal, by making two-dimensional array of a feature whose relative abundance correlates with disease, and comparing with abundance of the feature in samples of healthy persons.
                                                                                                                                                                                                                   Durham KL, Friedman DL, Herath HMAC, Kimmel LH, Parekh RB;

The invention relates to methods and compositions for screening, the invention relates to methods and compositions for screening, the diagnosis and prognosis of Schizophrenia. The method involves detecting the presence of Schizophrenia (SCH) in samples, e.g. by electrophoresis, associated Protein Isoforms (SFIS) in samples, e.g. by electrophoresis, inmunoassay or hybridisation assay, for diagnosing and monitoring SCH, studying the effectiveness of treatments and for identifying potential control of the relative abundance of at least 1 chosen feature correlates (SCH) and the relative abundance of at least 1 chosen feature which correlates with the presence or absence of SCH; and (2) monitoring the effect of the charpy administered to a subject with SCH and the relative abundance of at least 1 chosen feature which correlates with the severity of SCH. The secondary messengers) are studied to diagnose SCH, monitor the progress of the disorder and the effectiveness of treatment and as targets to dentify and produce potential therapeutic agents for the treatment of SCH. The paucity of detectable neuralgic defects distinguishes neuropsychiatric disorders such as SCH from neurological disorders, where many cases. Consequently the identification and characterisation of necessary for improve direatment of neuropsychiatric disorders and neuropsychiatric disorders. ANUISTR cellular and/or molecular causative defects and neuropsychiatric disorders. ANUISTR sepresent the anino acid sequences of schizophrenia-associated is seferited.
                                                                                                                                                                                                                                                                                                                                                                       Diagnosing and monitoring Schizophrenia by detecting the presence of Schizophrenia Associated Features and Schizophrenia Associated Protein Isoforms in samples of cerebrospinal fluid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; neuroprotective; nootropic; gene therapy; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8X8X5X5X5X5X5X5X5X5X5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a preparation comprising an isolated Bipolar Affected Disorder (BAD)-Associated Protein Isoform (DPIS). The DPI's are used to screen, diagnose or tryognose of BAD or unipolar depression, identify a determine the stage or severity of BAD or unipolar depression, identify a subject at risk of developing BAD or unipolar depression, or monitor the effect of therapy in a subject. They are also used to screen for or identify agents that interact with a DPI. These agents, antibodies against the DPIs, and mucleic acids encoding the DPIs are used to treat or prevent BAD or unipolar depression. Diseases that can be treated are attention deficient disorder, a schizoaffective disorder, a bipolar or a minjolar affective disorder. The DPIs are used in proteomics. The proteomic approach of using DPIs for screening, diagnosis of proteomic approach of using DPIs for screening of using gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expression analysis, such as not being able to obtain central nervous system (CNS) tissue from a living patient under normal circumstances. The present sequence is a DIP decreased in the CSF (cerebro-spinal fluid) of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preparation for diagnosing or treating bipolar affected disorder (BAD) unipolar depression, or for screening for modulators, comprises a BAD-associated protein isoform.
CSF; antidepreBsant; antimanic; nootropic; tranquiliser; neuroleptic; attention deficient disorder; schizoaffective disorder; unipolar affective disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the identification of depression associated protein isoforms (DPIs), particularly the tryptic digest deptides of these proteins. Some of the DPIs (AAU28404-AAU28625) described are decreased in the cerebrospinal fluid (CSF) of BAD (bipolar affective disorder) ambjects, whilst other DPIs (AAU28626-AAU28887) are increased in BAD subjects, Also described are peptide sequences identified from DPI-45 and DPI-31 and the nucleic acid sequence they are encoded by. The sequences of the invention are useful for clinical screening, diagnosis, prognosis, therapy and prophylaxis of meuropsychiatric disorders e.g. BAD (also known as bipolar mood disorder, schizoaffective disorders, and unipolar affective disorders. The present sequence represents one of the DPI tryptic diseates. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acid encoding a protein associated with bipolar affective disorder, which is used for diagnosis, prophylaxis and therapy of neuropsychiatric disorders, such as bipolar affective disorder.
                                                                                                                                                                                                                                                                                        Human; depression associated protein isoform; tryptic digest peptide; DPI; cerebrospinal fluid; CSF; BAD; bipOlar affective disorder; neuropsychiatric disorder; bipolar mood disorder; neuroleptic; maniac-depressive illness; schizoaffective disorder.

New schizophrenia associated protein isoforms and encoding nucleic acid molecules, useful for treatment, diagnosis and prognosis of schizophrenia and screening for potential drugs for treatment and new drug targets.
                                                                                                                                                                                                                                        Schizophrenia-associated protein isoform, SPI, SPI-206, SPI-238, SPI-240, neuroleptic, gene therapy, cerebrospinal fluid, serum, plasma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence represents a schizophrenia-associated protein isoform (SPI). These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable in cerebrospinal fluid, serum or plasma and are useful markers of schizophrenia. The sequences can be used for treatment and diagnosis of schizophrenia, screening, prognosis, monitoring the results of therapy, identifying patients most likely to respond to a particular therapy and identification of new targets for drug treatment. SPI DNA is useful as a nucleic acid probe to detect the presence of nucleic acids or SPIs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, Bipolar Affective Disorder, BAD, Depression-Associated feature, DF; Depression-Associated protein isoform, DFI; Cerebro-spinal fluid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to screening, diagnosis or prognosis of Vascular Dementia (VD) in a subject comprising analysing body fluid from the subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of features containing at least one chosen feature whose relative abundance correlates with the presence, absence, stage or severity of VD or predicts the onset or course of VD, especially detecting in a sample of cerebrospinal fluid (CSF) from the subject one of 223 VD-associated protein isoforms (VPIS) (ABB55801-ABB56295) as fully defined in the specification. Detecting VD-associated features and VDI is useful for the screening, diagnosis or prognosis of VD, for determining the stage or the effect of therapy administered to a subject having VD. Nucleic acids encoding a VPI or inhibiting the function of a VPI are useful for the treatment of VD and for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Screening, diagnosis or prognosis of vascular dementia (VD), useful for determining stage of VD and monitoring the effect of VD therapy, comprises analyzing body fluid by 2-dimensional electrophoresis for features correlated with VD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VD-associated protein isoform; VPI; screening;
comprises analyzing body fluid by 2-dimensional electrophoresis for features correlated with VD.
                                                                                                                                                                                                                                                                                                                                                                               Query Match 60.6%; Score 20; DB 4; Length 7; Best Local Similarity 42.9%; Pred. The invention relates to screening, diagnosis or prognosis of Vascular Dementia (VD) in a subject comprising analysing body fluid from the subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of features containing at least one chosen feature whose relative abundance

correlates with the presence, absence, stage or severity of VD or perdicts the onset or course of VD. especially detecting in a sample of cerebrosphial fluid (CSF) from the subject one of 223 VD-associated protein isoforms (VPIS) (ABBSS801-ABBS5295) as fully defined in the protein isoforms (VPIS) (ABBSS801-ABBS5295) as fully defined in the screening, diagnosis or prognosis of VD, for determining the stage or severity of VD, for identifying a subject at risk of VD or for monitoring the effect of therapy administered to a subject having VD. Nucleic acids encoding a VPI or inhibiting the function of a VPI are useful for the treatment of VD and for gene therapy
                                                                                                                                                                                                                                                                                                    ö

Peptides AAR81847-54 are tryptic peptide fragments from human afamin (AAR81845) novel member of the human serum protein family. The fragments were used to design primers and probes (AAT00786-98) for the cloning of the afamin gene (AAT00785) from human liver cDNA. Afamin is thought to have similar properties to human albumin, alpha-foetoprotein and vitamin be binding protein due to homology with these proteins. The gene encodes a mature protein of 66576 daltons without post-translational processing (ca. 87000 daltons with post-translational processing). The protein was protein can be used to ameliorate ischemia-reperfusion injury, protein can be used to ameliorate ischemia-reperfusion injury, rheumatcid arthritis, ARDS, cardiopulmonary bypass, sepsis, toxic plasma substances released after inflammation, etc
                                                                                                                                                                  Human afamin or a variant and poly:nucleotide(s) encoding it - a human serum protein with activities in common with other members of this family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; rheumatoid arthritis; RA; diagnosis; RPI; RADF; detection; rheumatoid arthritis diagnostic feature; BRDI; synovial fluid; rheumatoid arthritis diagnostic protein isoform; screening; expression reference protein isoform; prognosis.

arthritis (RA) using two-dimensional electrophoresis to generate a two-dimensional array of features. The method can be used for screening, diagnosis and prognosis of RA in a subject or for monitoring the effect of an anti-RA drug or therapy administered to a subject. The method comparises: (a) analysing a sample of serum or plasma and optionally comparises: (a) analysing a sample of serum or plasma and optionally comparises: (b) identifying at least one chosen dimensional array of features; (b) identifying at least one chosen cature whose relative abundance correlates with the presence or absence of RA, and (c) comparing the abundance of each chosen feature in the sample with the abundance of that chosen feature in serum or plasma from or more persons without RA, where the relative abundance of the chosen feature or features in the sample indicates the presence or absence of RA in the subject. The method can also be used in clinical attudies for testing drugs for therapy of RA, for purification of RA-diagnostic feature (RADF) proteins can be used to identify compounds that promote or inhibit their activity, which are then used as RA drugs. Nucleic acid encoding RADFs can be used in gene therapy protocols. AAY41844 to AAY42100 represent RPI peptides, AAY42101 to AAX25066 to AAZ25068 represent dependence protein isoform peptides and AAZ25066 to AAZ25068 represent dependence protein isoform peptides and can be used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening, diagnosis or prognosis of vascular dementia (VD), useful for determining stage of VD and monitoring the effect of VD therapy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vascular Dementia; VD; VD-associated protein isoform; VPI; screening;

arthritis (RA) using two-dimensional electrophoresis to generate a two-dimensional array of features. The method can be used for screening, diagnosis and prognosis of RA in a subject or for monitoring the effect of an anti-RA drug or therapy administered to a subject. The method comprises: (a) analysing a sample of serum or plasma and optionally comprises: (a) analysing a sample of serum or plasma and optionally comprises: (a) analysing a sample of serum or plasma and optionally comprises: (b) identifying at least one chosen dimensional array of features; (b) identifying at least one chosen feature whose relative abundance corraltes with the presence or absence of RA, and (c) comparing the abundance of each chosen feature in the sample with the abundance of that chosen feature in the sample with the abundance of the sample indicates the presence or absence of RA in the subject. The method can also be used in clinical studies for testing drugs for therapy of RA, for purification of RA-diagnostic feature (RADF) proteins can be used to identify compounds that promote or inhibit their activity, which are then used as RA drugs. Nucleic acid encoding RADFs can be used in gene therapy protected a AAX1844 to AAX2100 represent RPI peptides, AAX42101 to AAX225066 to AAX225068 represent descent invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention is concerned with producing scaffold proteins based upon the human CTRA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthitis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0; Gaps

These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, theumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding;

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands 12.56, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands functionally equivalent derivative of these sequences. The beta strands formered so the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures of the next by hydrogen bonds, which beta strands are connected to each other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. Therefore the scaffold protein may be used to target the complex to tumour cells. Another surface may be bound to a qrotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used in stabilize individual peptides in a peptide library and may be used in clayers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands s1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of form two beta sheets $1/$4/$3 and $5/$5/$2 and beta sandwich architecture. If the additional beta strands A1-3 are beta sandwich architecture. If the additional beta strands A1-3 are included in the structure the scaffold is constructed of two beta sheets, with the structures and $5/$5/$2/$2/$2/$3.73 The beta strands are connected to cher via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      74

Bur. J. Biochem. 250:727-734(1997).

-I- FUNCTION: May act as a neurotransmitter or neuromodulator.

-I- SIMILARITY: Belongs to the allatostatin family.

Nouropeptide; Amidation; Multiplene family.

"ISOJATION and identification of multiple neuropeptides of the allacostatin superfamily in the shore crab Carcinus maenas.";
Eur. J. Biochem. 250:727-734(1997).
-!- FUNCTION: May act as a neurotransmitter or neuromodulator.
-!- SIMILARITY: Belongs to the allatostatin family.
Neuropeptide, Amidation, Multigene family.
MOD RES 7 7 MIDATION (POTENTIAL).
SEQUENCE 7 AA, 770 MM; 672879CDGSDDB70 CRC64;
                                                                SEQUENCE.

-!- SUBCELLAR LOCATION: Secreted.
-!- PTM: Sulfation is important for activity and for the binding to
    putative membrane receptor (By similarity).
-!- SIMILARITY: Belongs to the phytosulfokine family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=CV. Cycochrome-c oxidase (EC 1.9.3.1) chain I [imported] - river lamprey mitochondrion Cycochromeria intochondrion Lampetra fluviatilis (river lamprey)
C,Species: mitochondrion Lampetra fluviatilis (river lamprey)
C,Accession: T13892
R,Delarbre, C; Barriel, V; Tillier, S.; Janvier, P.; Gachelin, G.
A,Title: The main features of the craniate mitochondrial DNA between the NDI and IA,Reference number: Z17775; MUID:97398704; PMID:9254918
A,Accession: T13892
A,Accession: T13892
A,Accession: T13892

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 30, Application US/08136743B

Patent No. 5459063

GENERAL INFORMATION:

APPLICANT: Barry S. Cooperman, Harvey Rubin,

APPLICANT: Jerome Salem, and Alison L. Fisher

ITLE OF INVENTION: "Plasmodium falciparum Ribonu-

TITLE OF INVENTION: "Percof"

NUMBER OF SEQUENCES: 67

CORRESPONDENCE ADDRESS:

ADDRESSE: The University of Pennsylvania

STREET: 310 market Street

CITY: Philadelphia

STATE: Pennsylvania

COUNTRY: U. S.A.

ZIP: 19104-3246

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette, 3.50 inch, 720 Kb
                                                             "Plasmodium falciparum Ribonu-

                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

GENERAL INFORMATION:
THE OF INVENTION: Use of a Polypeptide as Cell Receptor for Adenoviruses
TITLE OF INVENTION: Use of a Polypeptide as Cell Receptor for Adenoviruses
STILE REFERENCE: 032751-036
CURRENT APPLICATION NUMBER: US/10/156,820
CURRENT APPLICATION NUMBER: US/206-30
PRIOR FILING DATE: 1998-01-30
PRIOR PELING DATE: 1997-01-30
PRIOR PELING DATE: 1997-09-09
NUMBER OF SEQ ID NOS: 98
SOPTWARE: PastSEQ for Windows Version 4.0

The present invention relates to a method for selecting proteins for displayability on a yeast cell surface. The method comprises transforming yeast cells with a vector that expresses a test protein fused to a yeast cell will mail protein fused to a yeast cells with a label that binds to proteins displayed on the cell wall, and isolating label bound cells, where the test protein is from a variegated population generated by mutagenesis. The invention is also directed to new processes for engineering T cell receptor for improved binding properties. Improved T cell receptor molecules are useful in therapies for cancer, sepsis, autoimmus diseases such as arthritis, diabetes or multiple sclerosis. The methods are useful to select proteins with altered affinity, altered specificity or conditional binding. The present sequence is an epitope tag fused between protein of interest and yeast cell wall protein AGA2

```
Selecting proteins with enhanced phenotypic properties than wild-type proteins, is useful for highly specific cancer diagnosis and therapy.
                                                                                                                                                                                                                                                                                                                                                                                  Yeast cell wall protein, AGA2; T cell receptor, multiple cancer; sepsis; autoimmune disease; arthritis; diabetes.

                                                                                                                                                                                                                                                                                      This peptide comprises an epitope tag that can be used in methods of the invention. The invention discloses a powerful new system for engineering antibody affinity and specificity, by constructing a microbial analogue of the mammalian system's B cell repertoire. Antibodies are displayed on proteins, especially agglutinin proteins After mutation, variants are selected on the basis of improved binding characteristics with followescently labeled targets. The selection method also identifies proteins with enhanced phenocypic characteristics, proteins that are displayed at higher levels, proteins that are secreted at higher efficiency and proteins of improved stability
                                                                                                                         Selecting proteins with enhanced phenotypic properties than wild-type proteins, is useful for highly specific cancer diagnosis and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

The invention relates to a method for identifying compounds which inhibit internalization of cells surface receptors. Provided are an array of locations, each containing cells with a cell surface receptor protein, that are treated with a test compound. The protein is luminescently labeled or contacted with a luminescence produced is converted into test compound treatment. Any luminescence produced is converted into digital data and automatically analysed to determine if the test compound induced the protein internalization. The novel method is used to screen internalization, this can be used in drug discovery, to test compound internalization, this can be used in drug discovery, to test compound compact. It has high throughput and uses smaller volumes of reagents and test compounds. Sequences AAY7704-718 represent examples of peptide epitope tags used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Automated screening method for identifying compounds which induce cell surface receptor internalization, useful for drug discovery.

The invention relates to a novel non-native peptide derived from corticotropin-releasing factor-2 (CRF2). The non-native CRF2 peptides have the following activities: myopachic, osteopathic, hypotensive, cardiant, vasotropic, antidiabetic, analgesic, antiallergic, notropic, antidiabetic, analgesic, antiallergic, corticopic, antidiabetic, analgesic, antiallergic, nationallizer, anxiolytic, antidiabetic, analgesic, antiallergic, control of pervent or related compounds derived from other proteins, care used to prevent or treat disorders modulated by the CRF2 receptor, caused, heart/circulatory diseases (e.g. hypertension, congestive heart fallure, heart attack, reperfusion injury, migraine, stroke, memory loss, allure, heart attrack, reperfusion injury, migraine, stroke, memory loss, allure, heart attricis); metabolic disease (obseity or diabetees); pain, allergy; stress; anxiety; low levels of adrenocorticotrophic hormone; anorexia nervosa; depression; also to reduce body temperature and to control appetite or organitive function. Nucleic acids optionally labelled, that encode the non-native CRF2 peptides are used as primers and probes for amplification, also for gene synthesis and for recombinant therapy. Antibodies specific for the non-native CRF2 peptides are used to evaluate expression of the non-native CRF2 peptides are used to evaluate expression of the non-native CRF2 peptides after gene therapy.

This sequence represents a CRF2 non-native polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                    New non-native peptide derived from corticotropin-releasing factor-2, useful for treatment and prevention of e.g. muscular atrophy, also related nucleic acid and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Epitope tag, antibody engineering, yeast, surface display,
protein library, peptide library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       54.3%; Score 19; DB 7; Length 5; 80.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel non-native peptide derived from corticotropin-releasing factor-2 (GRF2). The CRF2 peptides have the following activities impopabilic, osteopathic, hypotensive, cardiant, vasotropic, antidiabetic, analgesic, antiallergic, tranquilizer, antidiabetic, antidiathritic. The CRF2 peptides, and antidiathritic. The CRF2 peptides, and cardiant, and antidathritic. The CRF2 peptides, and created compounds derived from other proteins, as used to prevent or treat disorders modulated by the CRF2 receptor, e.g. skeletal muscle atrophy or wasting, and bone disorders, however caused, heart discalatory reperfusion injury, migraine, stroke, memory loss, Alzheimer's disease, reperfusion injury, migraine, stroke, memory loss, Alzheimer's disease, ceperfusion injury, migraine, stroke, memory loss, Alzheimer's disease, ceperfusion injury, migraine, stroke, memory loss, Alzheimer's disease, ceperfusion injury, migraine, stroke, memory loss, Alzheimer's disease, obesity or diabetes); pain allorgy; stress; anxiety; low levels of adrenocorticotrophic hormone, anorexia nervosa; depression, also to reduce body temperature and to control appetite or cognitive peptides are used as primers and probes for amplification, also for gene synthesis and for recombinant production of GRF2 peptides, including use in gene therapy. Antibodies specific for the CRF2 peptides, including use valuate expression of the CRF2 peptides after gene therapy. This sequence represents a novel native CRF polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            non-native; corticotropin-releasing factor-2; CRF2; myopathic; osteopathic; hypotensive; cardiant; vasotropic; antimigraine; cerebroprotective; nootropic; neuroprotective; antidiabetic; analgesic; antidiapetic; analgesic; antidepressant;
                                                                                                                                                                                                                                                                                                                                     New non-native peptide derived from corticotropin-releasing factor-2, useful for treatment and prevention of e.g. muscular atrophy, also related nucleic acid and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

fragments used in an assay to determine novel transcriptional activators.

It fragments used in an assay to determine novel transcriptional activators.

The method involves the production of transcriptional activators.

Comprising of a DNA-binding group and does not represent a comprising of a natural transcription activator. Protein-protein

Covalently bonded to the DNA binding group and does not represent a comprising of a natural transcription activator. Protein-protein

Covalently bonded to the DNA binding group and does not represent a contractions are identified in the assay by fusing a DNA-binding domain can alibrary of DNA fragments and introducing this and a fusion of target to a library that interact with the target from activation of transcription.

Covalently den a polypoptide containing a region of Gal4 which interacts with the target from activation of transcription.

Covalently den activity, particularly in gene therapy (e.g. recognizing a site close to a selected therapeutic gene). Transcription can be activated without blocking other transcriptional activators. They probably act by interacting with a component of the RNA polymerase II

Choloenzyme, Galli, the strongest known yeast activator, which provides a interactions. Such activators do not create toxicity problems even when
New transcriptional activator containing DNA binding domain bound to peptide - useful for controlling gene expression, especially in gene therapy, and in protein-protein interaction assays, does not inhibit other transcription activators.
                                                                                                                                                                                                                                                                                                                 Example 1; Page 26; 55pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 6 AA;

```
The invention relates to diagnosing the presence of colon cancer, metastases of colon cancer, staging colon cancer, monitoring colon cancer for the onset of metastasis or monitoring a change in stage of colon cancer in a patient. The method involves determining a colon specific gene (CSG) in cells, tissues or bodily fluids and comparing it with levels of CSG in cells, tissues or bodily fluids from a normal human control. Colon cancer can be treated by administering a molecule which down regulates the expression or activity of CSG. An immune response is mounted. Therefore to a cSG protein to a patient, so that a nimmunologically stimulatory amount of a CSG protein to a patient, so that an immunologically stimulatory amount of a CSG protein to a patient, so that colon cancer in a patient by administering an agent labelled with paramagnetic ions or a radioisotope to the patient. They are also useful for preventing the onset of colon cancer, and in diagnosis and treatment of the disease. Sequences AAUSB3502 represent human colon specific protein antibody binding sites used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Diagnosing, staging or monitoring colon cancer involves determining a colon specific gene in cells, tissues or body fluids in patient, and comparing it with levels of the gene from a normal human control.

                                                                                                                                              Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                     The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, theumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence corresponds to a peptide (CDR-H1-7; AAY14403) derived from the sequence of the heavy chain variable region complementarity determining region (CDR)-1 of the anti-hepatitis C virus (HCV) Ser/Thr protease monoclonal antibody (MAD) 8D4 protein. The peptide has a Tyr to Phe amino acid substitution at position 3 compared to the CDR-H1-7 peptide. The invention relates to the use of partial peptides (AAY14348-Y14353) from the MAD 8D4 for inhibiting HCV serine protease activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Neutralized antibody partial peptide derived from hepatitis C virus -
useful for inhibiting Hepatitis C Virus (HCV) serine protease activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Complementarity determining region; CDR; monoclonal antibody; MAb; hepatitis C virus; HCV; protease; binding site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide CDR-H1-7(Y3F) derived from anti-HCV protease MAb 8D4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

Sequences AAV40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a beta sheet. Peptides (AAY40601-C S4 peptide which forms part of a beta sheet. Peptides (AAY40601-C Y40609) together form a single-chain scaffold protein which contains at least 6 beta-strands. The scaffold protein which contains at least 6 beta-strands. The scaffold protein sconstructed of beta crands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands C furn two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. C form two beta sheets s1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to each constructed of two beta sheets, with the structures of the next by manno acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold conduct cells. Therefore the scaffold protein may be used to target the complex to tumour cells. Another surface may be bound to a protein which binds to a surface may be bound to a cyctoxic molecule or an autoimmume antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target cumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used in catalizate individual peptides in a poptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                               New scaffold protein, useful for stabilizing antigens used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding;
SCA domain; cancer; thrombosis; osteoporosis; rheumatoid arthritis;
diabetic retinopathy; atherosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      쉽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine; tumour; chemotherapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                               Human, CTLA-4; scaffold protein, antigen-binding; receptor-binding;
SCA domain, cancer; thrombosis; osteoporosis, rheumatoid arthritis;
diabetic retinopathy; atherosqlerosis.

or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention is concerned with producing scaffold proteins based upon the human CTA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen. or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Sequences AAV40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAV40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheer. Peptides (AAV40601-CC V40609) together form a single-chain scaffold protein which contains at least 6 beta-strands. The scaffold protein which contains at least 6 beta-strands. The scaffold protein is constructed of beta strands also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of the next by hydrogen bonds, which generate a beta sandwich architecture. The next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures of the next by hydrogen bonds, where at least one of the loops binds to a scaffold is constructed of two beta sheets, with the structures of the rule amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to to bind two separate molecules. For example, one surface of the scaffold current which binds to a turnour antigen. Therefore the scaffold protein may be used to target the complex to tumour cells. Another surface may be bound to a protein which protein may also be used to charget chemotherapeutic agents to specific cells. It may also be used to diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New scaffold protein, useful for stabilizing antigens used as vaccines.
                                                                                                                                                             Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine; tumour; chemotherapeutic agent.
                                                                                                                        84 derivative #11, beta strand of scaffold protein structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Desmet J, Hufton S, Hoogenboom H, Sablon

New scaffold protein, useful for stabilizing antigens used as vaccines. Disclosure; Page 6; 105pp; English.

Hoogenboom H, Sablon E;

Desmet J, Hufton S, WPI; 1999-542958/46. Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAX40607) which forms part of a scaffold protein. S4 is a beta serand peptide which forms part of a beta sheet. Peptides (AAX40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands and any also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of contructed to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures calfold is constructed of two beta sheets, with the structures calfold is constructed of two beta strands are connected to other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- SUBCELLULAR LOCATION: Secreted.
-!- PTM: Sulfation is important for activity and for the binding to putative membrane receptor (By similarity).
-!- SIMILARITY: Belongs to the phytosulfokine family.
Growth factor; Sulfation.
